Jan 19 2018 The Lidar data is in UTM meters and my CAD drawing is in Minnesota state plane feet. I can create surfaces using the Lidar DEM files but I m having trouble re projecting and converting the elevations from meters to feet

I can re project using ArcMap but I don t have the spatial analyst to convert the elevations from meters to feet Nov 9 2021 I need my dimstyle to have primary unit suffix m for meters. My alternate unit needs to be feet inches

Can I convert my primary unit to meters instead of just using m as suffix? Using scale factor doesn t work as it also changes my alternate unit Jun 27 2016 I have checked the units in this drawing and they are in meters however when I try to make an alignment and then change the station labels they show as feet

Can someone please tell me how to change this? Drawing with an alignment attached Jun 4 2019 I have a existing drawing in inches and i am trying to convert them to feet. It wont be changed. quick properties tab wont apply for that drawing. How to change everything to feet from inches

In properties it show lenght is in meters when I change it to feet it wont work

Please give me the prope Nov 5 2024 Since feet is indicated under elevation units in Image 2 you ll have the correct elevation units feet not meters when you build your surface and STILL have geospatial accuracy in the X and Y coordinates Mar 10 2018 The default gravitational acceleration $196.2 \text{ studs sec}^2$ would suggest that there are 20 studs in a meter as it is precisely 20 times the gravitational acceleration on Earths surface in meters sec^2 Jan 8 2025 Like feet to inches and inches to feet or mm to inches ect

So what s happening with US Survey Feet? Is there a scenerio where you need to go Feet to US Survey Feet or US Survey Feet to Feet when inserting drawings into other drawings? Oct 5 2015 AutoCAD is UNITLESS and doesn t undestand inches or meters

In the below DDUNITS dialog you are specifying the units of the drawing when inserting blocks. You can setup your dimensions to use METERS as the dimension unit but you draw in unitless units Nov 30 2024 A comprehensive physics toolkit for creating accurate games and models in Roblox Studio

Unit Conversion Length Studs Meters Feet Mass RMU Kilograms Pounds Force Rowtons Newtons Pound force Torque Rowton stu Jan 9 2025 The Drawing Units are set to feet but the coordinate system that is set will use US Survey Feet. This is what will be used when inserting a georeferenced drawing

If the drawing being inserted isn t in a geodetic system. These setting won t matter. It s when you re dealing with a system where the basepoint is many miles
