May 11 2015 There are multiple ways of writing out a given complex number or a number in general. Usually we reduce things to the simplest terms for display saying  $\$0\$$  is a lot cleaner than saying  $\$1 1\$$  for example. The complex numbers are a field

This means that every non  $\$0\$$  element has a multiplicative inverse and that inverse is unique. While  $\$1 i = i^{\{1\}}\$$  is true pretty much by definition Aug 30 2010 There are infinitely many possible values for  $\$1^i\$$  corresponding to different branches of the complex logarithm

The confusing point here is that the formula  $\$1^x = 1\$$  is not part of the definition of complex exponentiation although it is an immediate consequence of the definition of natural number exponentiation Jan 15 2013 Possible Duplicate How do I convince someone that  $\$1+1=2\$$  may not necessarily be true? I once read that some mathematicians provided a very length proof of  $\$1+1=2\$$

Can you think of some way to Jun 13 2020 Is there a formal proof for  $\$ 1 \times 1 = 1\$$ ? It's a fundamental formula not only in arithmetic but also in the whole of math

Is there a proof for it or is it just assumed? Intending on marking as accepted because I'm no mathematician and this response makes sense to a commoner. However I'm still curious why there is 1 way to permute 0 things instead of 0 ways Mar 30 2020 This is same as AA 1

It means that we first apply the A 1 transformation which will take us to some plane having different basis vectors

If we think what is the inverse of A 1? We are basically asking that what transformation is required to get back to the Identity transformation whose basis vectors are  $i^1 0$  and  $j^0 1 1 2 3$  Aug 24 2016 False Proof of  $1=1$  [duplicate] Ask Question Asked 9 years 4 months ago Modified 9 years 4 months ago Apr 28 2020 I'm self learning Linear Algebra and have been trying to take a geometric approach to understand what matrices mean visually

I've noticed this matrix product pop up repeatedly and can't seem to determine Sep 25 2020 4 I am wondering how do I calculate the chances from a percentage? Example A 1 in 2 chance is 50% and 0.5 as a decimal

What I want to do is have the value 0.1431 14.3% and want to convert that into a 1 in chance any help is much appreciated thanks.
