May 11 2015 11 There are multiple ways of writing out a given complex number or a number in general. Usually we reduce things to the simplest terms for display saying 0 is a lot cleaner than saying 1^i for example. The complex numbers are a field

This means that every non 0 element has a multiplicative inverse and that inverse is unique Aug 30 2010 There are infinitely many possible values for 1^i corresponding to different branches of the complex logarithm

The confusing point here is that the formula $1^x = 1$ is not part of the definition of complex exponentiation although it is an immediate consequence of the definition of natural number exponentiation Jan 15 2013 Possible Duplicate How do I convince someone that $1+1=2$ may not necessarily be true? I once read that some mathematicians provided a very length proof of $1+1=2$

Can you think of some way to Jun 13 2020 Is there a formal proof for $1 \times 1 = 1$? It s a fundamental formula not only in arithmetic but also in the whole of math

Is there a proof for it or is it just assumed? Intending on marking as accepted because I m no mathematician and this response makes sense to a commoner. However I m still curious why there is 1 way to permute 0 things instead of 0 ways Mar 30 2020 This is same as AA 1

It means that we first apply the A^{-1} transformation which will take us to some plane having different basis vectors

If we think what is the inverse of A^{-1} ? We are basically asking that what transformation is required to get back to the Identity transformation whose basis vectors are $i = \begin{pmatrix} 1 \\ 0 \end{pmatrix}$ and $j = \begin{pmatrix} 0 \\ 1 \end{pmatrix}$ Aug 24 2016 False Proof of $1 = 1$ [duplicate] Ask Question Asked 9 years 4 months ago Modified 9 years 4 months ago This sum is called H_n the n th harmonic number and has no known closed form Apr 28 2020 I m self learning Linear Algebra and have been trying to take a geometric approach to understand what matrices mean visually

I ve noticed this matrix product pop up repeatedly and can t seem to de.
