May 11 2015 There are multiple ways of writing out a given complex number or a number in general. Usually we reduce things to the simplest terms for display saying 0 is a lot cleaner than saying $1 1$ for example. The complex numbers are a field

This means that every non 0 element has a multiplicative inverse and that inverse is unique. While $1 i = i^{ 1}$ is true pretty much by definition Jun 13 2020 Is there a formal proof for $ 1 \\times 1 =1$? It s a fundamental formula not only in arithmetic but also in the whole of math

Is there a proof for it or is it just assumed? Aug 30 2010 There are infinitely many possible values for 1^i corresponding to different branches of the complex logarithm

The confusing point here is that the formula $1^x =1$ is not part of the definition of complex exponentiation although it is an immediate consequence of the definition of natural number exponentiation Jan 15 2013 Possible Duplicate How do I convince someone that $1+1=2$ may not necessarily be true? I once read that some mathematicians provided a very length proof of $1+1=2$

Can you think of some way to 1 2 3 Mar 30 2020 This is same as AA 1. It means that we first apply the A 1transformation which will take as to some plane having different basis vectors

If we think what is the inverse of A 1? We are basically asking that what transformation is required to get back to the Identity transformation whose basis vectors are i ^ 1 0 and j ^ 0 1 Intending on marking as accepted because I m no mathematician and this response makes sense to a commoner

However I m still curious why there is1way to permute 0 things instead of 0 ways Aug 24 2016 False Proof of 1= 1[duplicate] Ask Question Asked 9 years 4 months ago Modified 9 years 4 months ago This sum is called H_n the nth harmonic number and has no known closed form Apr 28 2020 I m self learning Linear Algebra and have been trying to take a geometric approach to understand what matrices mean visually

I ve noticed this matrix product pop up repeatedly and can t seem to de.
