May 11 2015 11 There are multiple ways of writing out a given complex number or a number in general. Usually we reduce things to the simplest terms for display saying $\$0\$$ is a lot cleaner than saying $\$1^{i\$}$ for example. The complex numbers are a field

This means that every non $\$0\$$ element has a multiplicative inverse and that inverse is unique Aug 30 2010 There are infinitely many possible values for $\$1^{i\$}$ corresponding to different branches of the complex logarithm

The confusing point here is that the formula $\$1^{i\$} = 1$ is not part of the definition of complex exponentiation although it is an immediate consequence of the definition of natural number exponentiation Jan 15 2013 Possible Duplicate How do I convince someone that $\$1+1=2\$$ may not necessarily be true? I once read that some mathematicians provided a very length proof of $\$1+1=2\$$

Can you think of some way to Jun 13 2020 Is there a formal proof for $\$1^{i\$} = 1$? It's a fundamental formula not only in arithmetic but also in the whole of math

Is there a proof for it or is it just assumed? Intending on marking as accepted because I'm no mathematician and this response makes sense to a commoner. However I'm still curious why there is 1 way to permute 0 things instead of 0 ways Mar 30 2020 This is same as AA 1

It means that we first apply the A 1 transformation which will take us to some plane having different basis vectors

If we think what is the inverse of A 1? We are basically asking that what transformation is required to get back to the Identity transformation whose basis vectors are $i^{i\$}$ and $j^{i\$}$ Aug 24 2016 False Proof of $\$1^{i\$} = 1$ [duplicate] Ask Question Asked 9 years 4 months ago Modified 9 years 4 months ago Apr 28 2020 I'm self learning Linear Algebra and have been trying to take a geometric approach to understand what matrices mean visually

I've noticed this matrix product pop up repeatedly and can't seem to determine Sep 25 2020 4 I am wondering how do I calculate the probability of getting 1 in 2 chances from a percentage? Example A 1 in 2 chance is 50% and 0.5 as a decimal

What I want to do is to convert the value 0.1431 (14.3%) into a 1 in 2 chance. Any help is much appreciated.
