Oct 27 2009 As the aforementioned RFC does not include any reference of encoding spaces as + I guess using %20 is the way to go today

For example %20 is the percent encoding for the binary octet 00100000 ABNF %x20 which in US ASCII corresponds to the space character SP MetaByte I think it is more technically correct to phrase the question as In a URL should I encode the spaces using %20 or + in the query part of a URL? because while the example you show includes spaces only in the query part it might not be clear to all readers that the answer depends Sometimes the spaces get URL encoded to the + sign and some other time to %20

What is the difference and why should this happen? Apr 18 2013 310 A bit of explaining as to what that %2520 is The common space character is encoded as %20 as you noted yourself. The % character is encoded as %25

The way you get %2520 is when your url already has a %20 in it and gets url encoded again which transforms the %20 to %2520

Are you or any framework you might be using double encoding Dec 14 2019 I am interested in knowing why %20 is used as a space in URLs particularly why %20 was used and why we even need it in the first place Since it's not mentioned anywhere in the grammar the only way to encode a space is with percent encoding %20

In fact the RFC even states that spaces are delimiters and should be ignored In some cases extra whitespace spaces line breaks tabs etc

may have to be added to break a long URI across lines OpenSSL Verify return code 20 unable to get local issuer certificate Asked 13 years 5 months ago Modified 1 year ago Viewed 390k times Set the JAVA_HOME Variable Windows 7 Right click My Computer and select Properties > Advanced Windows 8 Goto Control Panel > System > Advanced System Settings Windows 10 Search for Environment Variables then select Edit the system environment variables Click the Environment Variables button

Under System Variables click New. In the Variable Name field enter either JAVA_HOME if May 4 2016 I'm using Windows as a simple user I don't have any admin rights and want to install NodeJS LTS

On the download site I have the choice to download only the binary node.exe which doesn't include Feb 20 2023 Why do we need the concept keyword in C++20? Asked 2 years 10 months ago Modified 2 years 10 months ago Viewed 7k times.
