You could try to use String.Replace method to modify the xml document May 20 2013 I need to add a user to a role in a cube as part of an automated process so I need to use prefferably T sql to do so? Is there something wrong in the code block that I have developed for invoking the web method? What am I missing here? Where is the error? Can you help me spot it? Question 0 Sign in to vote User 1137493631 posted Hi I have an .net application which was developed with .net frame work 3.5

its a desk top application

i want to install this software in MAC OS I need to modify my return set based on an attribute value Question 0 Sign in to vote User 665585339 posted hi Guys To use mutual SSL in web service this is my below code System.ServicePointManager [1997] [1998] [1999] [2000] [2001] [2002] [2003] as pvt Monday May 7 2007 7 47 AM 0 Sign in to vote maybe this will explain what i want with the pivot ex i have table like this year1 year2 1994 1998 1995 1999 1996 2000 19972001i need the pivot to be like this year1 1998 1999 200020011994 data data data data 1995 data data I have a web service that I d like to be able to send a soap request to and basically print out the values that are returned There is an issue with the namespace prefix generation in the response in WCF.Please let me know if can use the web.config file with the below configuration for the same Hi there we need to write web service client in VS2005

For quickstart .NET WebService Studio 2.0 was used to check the exposed web service.
