May 31 2014 what is 3x x Need Math Help. I want to ask questions about math problems that i don t understood. For example Equations Distribute numbers and Simplify Expressions Sep 11 2019 When it says solve for y it just means get y by itself on one side

The easiest way to achieve this is by getting rid of the 3x

Since the 3x is being subtracted from y we must do the opposite add 3x to both sides  $y - 3x = 13 + 3x + 3x$   $y = 3x + 13$  If you have any questions don t hesitate to reach out! Nov 13 2013 What s the x intercept of  $y = 3x - 6$ ? Find an Online Tutor Now Choose an expert and meet online

No packages or subscriptions pay only for the time you need Dec 5 2012 Upvote 0 Downvote Comments 2 Report Price B

so if i have a problem  $3x + 14 = 3x$  it would solve to be  $0 = 14$ ? Apr 12 2025  $3x = 16 + 53x = 21$  Step 3 Use the Division method to solve for x  $3x = 21$  Divide both sides of the equation by 3 to solve for x  $3x \div 3 = 21 \div 3$   $x = 21 \div 3$   $x = 7$  Solution The answer to the equation  $3x - 5 = 16$  is  $x = 7$  I hope this information is useful

Please let me know if you require any more assistance Jan 26 2015 In the case of  $y = 3x - 2$  it is already in the slope intercept format therefore we just have to identify which is the slope and which the y intercept

Once we have it in this format slope is ALWAYS attached to the x variable Oct 14 2015 The linear equation is given in slope intercept form  $y = mx + b$

Here m is the slope b is the y intercept and x y represent any point on the line or the ordered pair that makes the linear equation true Oct 5 2023 A partial solution set is given for the polynomial equation. Find the complete solution set. Enter your answers as a comma separated list

$5x^3 - 3x^2 + 3x - 5 = 0$  {1} Nov 13 2020 Algebra 1 Matt G. asked 11 13 20 Write an Equation that is perpendicular to the line  $y = 3x + 5$  and goes through the point (6, 8) Write your equation in slope intercept form

Thank you! Jul 22 2025  $x = 3x - 3 - 2$  Multiply both sides by 2  $2 * x = 3x - 3 - 2$  simplify  $2x = 3x - 3 - 2$  Isolate the variable  $2x + 3 - 3x = 3x - 3 - 2 - 3x$  Cancel terms and Simplify  $3 = x$  Both methods will get you the right answer one is just easier than the other

Remember to plug your x value back into your original equation to show your proof.
