Apr 15 2014 Expectedgirlsfrom one couple\$ $\{ \}=0.5 \cdot 1 + 0.25 \cdot 1 = 0.75$
Expected boys from one couple\$ $\{ \}=0.25 \cdot 1 + 0.25 \cdot 2 = 0.75$ 1 As I said
this works for any reasonable rule that could exist in the real world

An unreasonable rule would be one in which the expected children per couple was
infinite Feb 9 2022 Considering the population ofgirlswith tastes disorders I
doabinomial test with number of success $k = 7$ number of trials $n = 8$ and
probability of success $p = 0.5$ totest my null hypothesis $H_0 =$ my cake tastes
good for no more than 50% of the population ofgirlswith taste disorders

In python I can run `binomtest 7 8 0.5 alternative= greater` which gives the
following result Aug 18 2017 Probability of having 2girlsand probability of
having at least one girl Ask Question Asked 8 years 4 months ago Modified 8
years 4 months ago Jul 4 2023 1st 2nd boy girl boy seen boy boy boy seen girl
boy The net effect is that even if I don t know which one is definitelyaboy the
other child can only beagirl or aboy and that is always and onlya 1 2 probability
ignoring any biological weighting thatgirlsmay represent 51% of births or
whatever the reality is Jan 10 2024 Use standard type for Greek letters
subscripts and superscripts that function as identifiers i.e

are not variables as in the subscript girls in the example that follows and
abbreviations that are not variables e.g. log GLM WLS. Use bold type for symbols
for vectors and matrices. Use italic type for all other statistical symbols Apr
1 2018 Source Harvard Statistics 110 see 17 p

29 of pdf .Acouple decidestokeep having children until they have at least one
boy and at least one girl and then stop

Assume they never have twi Mar 2 2017 Aprobability problem In how many different
ways can 5 people sit aroundaround table? Is the symmetry of the table
important? Answer If the symmetry of the table is not taken into account the May
16 2021 When you useapaired T test you are essentially doingaone sample test
where your one sample consists of the paired differences between outcomes in two
groups

If you createanew sample of these difference values and then apply the formula
foraone sample T test you will see that this is equivalenttothe paired test
Echoing the first answer. Don t bothertoconvert just model the counts and
covariates directly

If you do that and fitaBinomial or equivalently logistic regression modeltothe
boy girl counts you will if you choose the usual link function for such models
implicitly already be fittinga covariate smoothed logged ratio of boysto girls.
That s the linear predictor
