Aug 14 2015 MIT spinoutAIMBiotech has developed a microfluidics device that lets researchers co culture multiple cell types in a 3 D hydrogel environment that mimics natural tissue to more accurately study biological processes such as cancer metastasis and better capture how cancer cells react to chemotherapy agents Feb 3 2025 The MIT Generative AI Impact Consortium is a collaboration between MIT founding member companies and researchers across disciplines whoaimto develop open source generative AI solutions accelerating innovations in education research and industry May 20 2025 In recent years researchers have developed color correcting tools thataimto reproduce the true colors in the ocean

These efforts involved adapting tools that were developed originallyforenvironments out of water forinstance to reveal the true color of features in foggy conditions Feb 6 2024 MIT Pillar AI Collective has announced six fellowsforthe spring 2024 semester to conduct research in the areas of AI machine learning and data science with theaimof commercializing their innovations Nov 8 2024 Financial Times reporter Seb Murray highlights a new paper by Prof

Roberto Rigobon and Research Scientist Florian Berg that explores why different ESG ratings can paint different pictures of the same company finding that measurement differences between rating agencies are the main source of divergence

Murray notes that by exposing these inconsistencies the research highlights the May 20 2025 Using a computational strategy that allows them to combine information from many large datasets MIT researchers have identified several new potential targetsforAlzheimers disease Aug 27 2023 As more regions face extreme weather MIT News explores the 1.5 degree benchmarkforlimiting the effects of climate change including where the planet stands in relation to this threshold and what can be done at the global regional and personal level to keep 1.5 alive Dec 2 2025 Unlike traditional rigid robots that generallyaimto avoid contact with the environment as much as possible and stay far away from humansforsafety reasons this arm senses subtle forces stretching and flexing in ways that mimic more of the compliance of a human hand Mar 29 2024 MIT professor Rafael Jaramillo seeks to develop new more sustainable semiconductor materials

His work could improve the economics and reduce the environmental footprint of semiconductors used in telecommunications microelectronics photovoltaics and more Jun 19 2018 MIT and the Southern University of Science and Technology SUSTech in Shenzhen China have announced the launch of the CentersforMechanical Engineering Research and Education at MIT and SUSTech

The two centers which will be located at MIT and SUSTech aimto foster research
