Dec 26 2015 if valeur <= 0.6 ValueError The truth value of an array with more than one element is ambiguous. Use a.any or a.all I have read several posts about a.any or a.all but still can't find away that really clearly explain how to fix the problem

I see why Python does not like what I wrote but I am not sure how to fix it 650 Explain all in Python? I keep seeing the variable __all__ set in different __init__.py files. What does this do? What does __all__ do? It declares the semantically public names from a module

If there is a name in __all__ users are expected to use it and they can have the expectation that it will not change. It also will have Mar 11 2015 I tried searching for a command that could list all the file in a directory as well as subfolders using a command prompt command

I have read the help for dir command but couldn't find what I was looking for 190 Generally speaking all and any are functions that take some iterable and return True if in the case of all no values in the iterable are falsy in the case of any at least one value is truthy. A value x is falsy iff bool x == False. A value x is truthy iff bool x == True Mar 8 2017 In Visual Studio Professional we have a shortcut key Ctrl + M Ctrl + O to collapse all methods and properties in a class

How can I do a similar thing in Visual Studio Code? I know there are sh Jan 12 2019 How can I show all the branches including master in this case in a repository? I think it is important or else I will have the same false impression

Note the repository was created by git init an empty directory and then I git push a branch mongodbutils from another branch into this branch The latter lists all container entries which start with a container id

Entries are separated by space and therefore tail -n +2 skips the first line which is headers cut -d ' ' -f 1 splits every line by space and takes the first line entry which is the container id and xargs {} docker rm {} removes the container with the specific id

NOTES This doesn't delete the table it deletes all the rows from the tables and allows you to then continue to use the table unaffected. This is perfect for me thanks Dec 12 2013 I am searching for a list of all colors I can use in PowerShell

Since we need to provide names and no hex numbers it's hard to figure out if a color exists or not at least if you don't know how Jul 31 2025 When using GitHub Copilot in VS Code through the Chat tab it frequently suggests running terminal commands and asks for iteration permissions
