Jan 22 2025 Hi Does anyone happen to know the spoke size for an Axis sport 700c rim that comes as standard on a specialized allez sport 2021 model. I tried to measure Aug 18 2016 Having a new wheel built for bikepacking. Son Dynamo on a Stand Flow mk3 26 wheel

Thought the choice of spoke and nipples would be easy. Always had double butted on brass nipples but looking on sapims web site there seems to be more to it than meets the eye. Now I m not sure what I should Sep 25 2025 Radial lacing on that Sturmey Archer hub is correct and original

For a strong typical pattern Use Two Cross 2x lacing for both front and rear wheels. It s the standard for vintage commuters Dec 14 2014 The spoke then flexes in this section rather than at the second thinnest section the first thread

But because the shaft is smooth without any stress risers it has an infinite fatigue life. A double butted spoke will never break at the shaft but will fatigue if the wheelbuilder doesn t understand how to stress relieve the spoke Jul 22 2024 Just found a broken spoke on front wheel HUnt XC 29

Hunt sell spares but not confident I could effect a repair successfully as never done this before

Should I trust the LBS Halfords or someone else? May 31 2025 Is it the new spokes or the old spokes that keep breaking? Once a spoke is replaced is the wheel running smooth? If it s a DIY fix and it s the old spokes that keep breaking then over time you will have replaced most of the old spokes

Might be worth marking the new spokes to determine if it s the same location each time Sep 23 2010 The lighter a set of wheels the more expensive it becomes to save the few grammes. I would like to see effect of drilling extra holes in the inner box section of a rim

If you take a box section rim like this Mavic the outer section has the holes for the spoke nipple eyelets the inner wall Dec 1 2017 I ve done a few standard rims with plain alloy nipples and I ve seen how easy it is to replace a spoke on a Ksyrium wheel

My rear rim is wearing out faster than the rest of the wheelset so I fancy having a go at fitting a new rim. I would do it by taping the new beside the old and swapping the Dec 26 2018 Your wheel did not fail from a lack of maintenance but through the choice of inappropriate materials

Further no amount of bouncing off potholes makes one iota of difference to wheel life. If one hit doesn t do any damage a million of the same will do nothing
