In humans theanus pl. anuses or ani from Latin nus ring circle [1][2] is the external opening of the rectum located inside the intergluteal cleft

Two sphincters control the exit of feces from the body during an act of defecation which is the primary function of theanus Your anus is theend of your large intestine where food waste completes its journey through your digestive tract and makes its exit

Muscles nerves and mucous membranes in your anus work together to make healthy bowel movements that you can control The anus is theopening at the end of the digestive tract where stool leaves the body

The rectum is the section of the digestive tract above the anus where stool is held before it passes out of the body through the anus anus terminal opening of the anal canal the portion of the digestive tract through which fecal material is excreted

See also rectum The anus is theterminal opening of the digestive tract through which feces are expelled from the body. It marks the end of the anal canal and plays a critical role in the voluntary and involuntary control of defecation

Theanus is the last part of the digestive tract

Learn more about its anatomy including whereanalcancer is likely to start It consists of a muscular ring called a sphincter that opens during a bowel movement to allow stool feces to pass through as well as flat cells that line the inside of theanus.
