As the worlds largest professional society serving clinicians and scientists around the world who are working to conquer blood diseases ASH is fighting for hematology in the face of executive orders and other federal actions that threaten hematology research and ultimately the care of patients. Ash is the solid remnants of fires.

[1] Specifically ash refers to all non aqueous non gaseous residues that remain after something burns. In analytical chemistry to analyse the mineral and metal content of chemical samples ash is the non gaseous non liquid residue after complete combustion.

Ashes as the end product of incomplete combustion are mostly mineral but usually still. You may search for particular presentations by typing key words an author's name or the title in the box below. You may specify the type of search i.e

whether you want to see pages that contain any or all of the words you specify

The Boolean search option requires one of the keywords and or and not as well as parentheses. This installment of Drawing First Blood highlights a recent ASH Clinical News webinar moderated by editor in chief Aaron Gerds MD.

During the webinar Jonathon Cohen MD MS and Joshua Brody MD discussed some of the questions surrounding MCL treatment strategies. The meaning of ASH is any of a genus Fraxinus of trees of the olive family with pinnate leaves thin furrowed bark and gray branchlets.

How to use ash in a sentence ASH meaning 1 the soft gray powder that remains after something such as a cigarette or wood has been completely burned and destroyed by fire 2 the burned parts that remain when something is destroyed often used figuratively ASH meaning 1
