Feb 5 2025 22 I have a custom bootstrap button and I cannot remove its border after click. I was able to change its background color but there is an insistent blue border boring me

I click on it it opens a modal window and after closing the modal the border is still there until I click on another part of the page even if I change values in active and Sep 30 2015 Default Bootstrap size classes You can use btn lg btn sm and btn xs classes for manipulating with its size

btn block Also there is a class btn block which will extend your button to the whole block. It is very convenient in combination with Bootstrap grid

For example this code will show a button with the width equal to half of screen for medium and large screens and will show a full In Bootstrap 4 one should use the text center class to align inline blocks

NOTE text align center defined in a custom class you apply to your parent element will work regardless of the Bootstrap version you are using. And that s exactly what .text center applies Jan 29 2017 17 Try add role= button instead

I have had this problem even though the documentation on bootstrap says type= button should do the work but mine didn t Sep 22 2016 I use bootstrap 3 buttons and I want to modify the size to smaller I ve tried with the following which doesn t work .btn sml { padding 10px 10px font size 22px border radius 8px } Mar 15 2016 How would one put a link on a button with bootstrap? there are 4 methods in the bootstrap documentation Feb 10 2013 Twitter Bootstrap s buttons have a nice Loading state available

The thing is that it just shows a message like Loading passed through the data loading text attribute like this It button Change hover color on a button with Bootstrap customization Asked 11 years 3 months ago Modified 2 years 2 months ago Viewed 242k times Feb 1 2015 Is there a way to change all .btn properties in Bootstrap? I have tried below ones but still sometimes it shows the default blue color say after clicking and removing the mouse etc

How can I ch I added this but still the blue outline appear when the button is clicked. .btn focus { outline none } how to remove that ugly thingy?.
