Sep 30 2024 BGG had an energy audit done which informed his plan to remove the existing fiberglass batts air seal the attic install a ducted heat pump system then blow in cellulose insulation. He asks if while the attic is empty it is a good time to perform other upgrades

He is particularly interested in whether mechanical ventilation should be added Dec 31 2024 In a poorly sealed house roof venting can increase the stack effect meaning more air entering the house at the base and exiting into the attic

That's why the recommendation is to have more vents at the soffits than at the peak which slightly pressurizes the attic reducing exfiltration Nov 19 2024 I'm building a new single story single family house with an unvented attic and am looking for input on how to address my attached unvented garage attic

The home is located in Northern California in climate zone 3 C Marine so mild weather year round Jul 25 2024 Exhaust air from bathroom fans should never be ducted into an attic but rather to a point outside the building enclosure Jan 19 2025 Hi all I recently converted the formerly vented attic above my attached garage to an unvented and conditioned attic

This attic houses my geothermal air handler whole house dehumidifier and [] Feb 12 2021 Running unprotected ductwork through an attic can cause problems. Particularly in hot humid climates moisture can collect on the outside of ducts in summer

Encapsulating ducts in closed cell foam or following code prescribed methods for burying ducts in insulation can prevent the problem. Illustration courtesy Home Innovation Research Labs Apr 21 2025 The garage wall and ceiling have fire rated drywall

There is an attic space above the garage and an attic space above the house

Currently these two attic spaces are separated by plywood with an approximately 44 hole for a person to crawl through because the access to the attic is only through a hatch in the garage Dec 1 2025 I'm insulating my attic floor in climate zone 4A. Attic is vented with soffit and ridge

I have 26 floor joists. I was going to lay r 23 rockwool batts in between the joists and then do criss cross 24 studs on top of the joists and then lay r 15 rockwool batts in those achieving the required r38 and then a plywood floor on top Jul 22 2021 6

Keep your attic cooler with a reflective roof or radiant barrier Another way to reduce heat flow into your ducts from a hot unconditioned attic is to keep the attic cooler
