Auroras are the result of disturbances in the Earth's magnetosphere caused by enhanced speeds of solar wind from coronal holes and coronal mass ejections

These disturbances alter the trajectories of charged particles in the magnetospheric plasma Feb 4 2025 Also known as the northern lights aurora borealis or southern lights aurora australis auroras are colorful dynamic and often visually delicate displays of an intricate dance of particles and magnetism between the Sun and Earth called space weather For many people the aurora is a beautiful nighttime phenomenon that is worth traveling to arctic regions just to observe

It is the only way for most people to actually experience space weather

These links provide a discussion of the aurora phenomena and tips for the best opportunities to view aurora at various locations around the world May 6 2025 Auroras occur when charged particles from the sun collide with gases in Earth's upper atmosphere

These ghostly glows are most visible near the magnetic poles

But thanks to increasing solar 2 days ago Aurora luminous phenomenon of Earth's upper atmosphere that occurs primarily in high latitudes of both hemispheres in the Northern Hemisphere auroras are called aurora borealis aurora polaris or northern lights and in the Southern Hemisphere they are called aurora australis or southern lights Auroras are dazzling displays of light seen most often near the poles that are caused by solar storms that disrupt Earth's atmosphere Jan 21 2025 Nitrogen produces purple and blue hues across various altitudes. Auroras normally occur near the polar regions in both hemispheres

In the Northern Hemisphere they are called aurora borealis northern lights while in the South Hemisphere they are known as aurora australis southern lights Sep 25 2025 Frequently there are beautiful light shows in the sky. These lights are called auroras

If you're near the North Pole it is called an aurora borealis or northern lights

If you're near the South Pole it is called an aurora australis or the southern lights Nov 20 2025 Auroras also known as the Northern Lights in the Northern Hemisphere and the Southern Lights in the Southern Hemisphere are natural light displays in the sky that occur predominantly in high latitude regions Auroras are becoming more intense and visible in farther reaching places due to an increase in solar activity

They usually appear in high latitude regions like Norway Iceland Canada Alaska and parts of Russia but they're also occasionally visible at lower latitudes
