Apr 29 2020 Larger numbers to remember. Shooter MOA or Inches Per Hundred Yards IPHY vs MOA the difference in your computer can be significant Shooter MOA or IPHY is a modified version of True MOA that rounds the linear value of 1.047 to 1 at 100 yards

Changing this was a bit of a mistake made years ago by people shooting mid range distances Mar 3 2017 If you are not an MOA member why not take the time to join the club so you can enjoy posting on the forum the BMW Owners News magazine and all of the benefits of membership? Aug 26 2005 MOA is pretty easy to figure out at 100 yard increments but how do you go about reckoning it at shorter ranges like 25 50 or 75 yards? Apr 28 2020 Re MIL and MOA Range Equations Explained Derived I read the paper and it's good information

Nice work and good drawings

It's probably most interesting to math mavens but it's a good explanation of the derivation for those like me who remember things better when they understand how they work Jun 11 2023 I mainly follow the reloading forum and only have experience posting from there so I'm not sure how to post in a different forum yet

Regardless this post is all about figuring out Scope Turret dial up in MOA and Mils when you already know the bullet drop in inches based off a trajectory Jul 25 2020 Hello from France I am trying to understand how many MOA I need for my scope base mount depending on distances

For reference I use this guide If your scope has 80 MOA of travel 40 up and 40 down like the NXS 8x32 has divide the 80 by 2 equals 40 add 30 back due to the slope of the rail you will have a total possible 70 MOA of elevation adjustment

30 MOA + or of elevation at 1000 yards puts the reticle in the center of the optic where you have the best optical clarity Dec 19 2018 Okay rather than chase the details in that Mil vs MOA thread I am starting a new one with the math being discussed for using a single MPH with MOA like we do with Mils

History We are a Base Wind MPH which translates very well in Mils to our wind doping

There are multiple threads on the Apr 23 2008 0 MOA base > 0 MIL 20 MOA base > 6 MIL 25 MOA base > 7.5 MIL 30 MOA base > 9 MIL 35 MOA base > 10.5 MIL 40 MOA base > 12 MIL A 25 MOA base is a little uncommon most are 0 20 30 40 MOA

IF you go with a 30 MOA 9 MIL base you MAY or MAY NOT be able to zero properly at 25 or 50 yards it will be very close with the chosen scope Mar 8 2004 All 5 and later series air cooled Boxers from 1970 1995.
