Nov 2 2024 NASA sPioneer Venus 1was the first of a two spacecraft orbiter probe combination designed to study the atmosphere of Venus. It was the first American spacecraft to orbit Venus. The second spacecraft was launched a few months later

Pioneer Venus 1 used radar to map the surface of Venus PioneerVenus2 contained the first spacecraft to land from the United States the Day Probe. It soft landed on 9 December 1978

[1][2][3][4][5][6] The most recent lander was part of the Vega 2 mission which soft landed on 15 June 1985 Launched on 3 November 1973 Mariner 10 conducted flybys of bothVenusand Mercury becoming the first spacecraft to visit two planets

The spacecraft was launched on an Atlas Centaur rocket right from launch complex 36B at Cape Canaveral Air Force Station The Pioneer Venus orbiter was thefirstof a two spacecraft orbiter probecombination designed to conduct a comprehensive investigation of the atmosphere ofVenus May 20 1978 The 1 280 pound PioneerVenusleft the Kennedy Space Center atop an Atlas Centaur rocket at 9 13 a.m

EDT and flew into a parking orbit 115 miles above the earth where its Centaur engine was Dec 10 2018 The Pioneer Venus spacecraft provided a detailed and accurate picture ofVenus atmosphere the thick cloud layers and the wind systems

While the Multiprobes mission was brief once it arrived atVenus the Orbiter far outlasted its expected 243 day lifetime Dec 2 2025 Thefirstspacecraft to reach the vicinity of another planet and return data was the U.S. Mariner 2 in its flyby ofVenusin 1962

Since then Venushas been the target of more than 20 spacecraft missions In 1962 the American probeMariner 2flew past Venus for the first time at 35 000 km and took the first in situ measurements of the temperature then evaluated as > 200C and the high atmospheric pressure

It also discovered the slow retrograde rotation of Venus Launch vehicle company Rocket Lab and MIT plan to send the first private mission toVenusas early as January 2025

NASA's DAVINCI will be thefirstmission to visit theVenusianatmosphere since 1984 providing the most detailed measurements weve ever had of its composition and structure May 5 2025 Launched on July 22 1962 Mariner 1was NASA's first spacecraft sent to explore Venus and it marked a significant step in the United States early space exploration efforts

The missions goal was to study the atmosphere and surface of Venus which at the
