Bit banging SPI is relatively simple the code for bit banging I2C for instance will be more complex and you'll need a timer somehow if you want to bit bang the UART protocol Apr 4 2020 Here too the circuit has been running since the dawn of time

and with uic you're telling the solver to forget anything that might have happened before and consider that the Big Bang happens when you click run so it will have to calculate all the possible transients Nov 6 2020 0 I am searching for a solution to write a ~800 byte data stream at a 10K baud rate from a USB device

This is going to connect to a piece of hardware that uses a RS485 connection which expects an unconventional data stream which is why I needed to use a bitbang mode. I was using a FT232R USB cable to attempt to do this It's too late you should have started at the big bang

The best you can do is use a causal sinusoidal which has extra frequency components. But let's say that what you want to know is the response of the system to an arbitrary input in the time domain. You don't really need Fourier or Laplace to know this

A convolution will do Here's the method where I actually bitbang the transmission Method for transmitting value using serial bit banging void uart_tx_bit_bang unsigned char val { Feb 24 2022 I don't know about the actual grounding of planes

But what is critically important is that there is no potential between the fuel and the tanker when refueling otherwise you get the potential for a big bang pun intended So the fuel tanks as a reference makes sense Dec 8 2014 I want to turn it off but was just half a sec too late and BANG

The big capacitor in the PSU was blown. It was rated 2200uF 16V. Stupid. I can be happy we put the device already in its case otherwise it would've exploded in my face

Anyway what do I do now? Of course I need to replace the capacitor itself Mar 8 2016 If the outputs are connected in anti phase there will be a very big bang somewhere. At these currents arc flash protective clothing may be required

It's not relevant to your question about series connection but if you ever need to check the phase of two windings before parallel connection then Connect the two ground legs

Power up Oct 15 2022 The uic flag will force the solver to skip finding any operating points and start from zero as if the Big Bang starts with your pressing
