Sep 1 2019 The purpose of this systematic review was to determine the potential effects of dental procedures performed as presurgical preparation in any setting in adults 18 years or older before CVS or LVAD implantation compared with results with no dental pretreatment on morbidity and mortality outcomes all cause mortality IE rates other In this study we review the dental management strategy for patients who require valve surgery including time required for dental preparation the severity of the patients underlying cardiac condition and the management of antibiotic anticoagulant and antiplatelet therapy Sep 1 2017 Abstract This study sought to review current guidelines and the most optimal dental management for patients undergoing cardiac valve surgery Jun 8 2024 In patients requiring mitral valve surgery for primary MR mitral valve repair is preferred over mitral valve replacement if the anatomic cause is a degenerative disease and a successful durable repair is possible Dec 17 2020 A mitral transcatheter edge to edge repair is of benefit to patients with severely symptomatic primary mitral regurgitation who are at high or prohibitive risk for surgery as well as to a select subset of patients with secondary mitral regurgitation who remain severely symptomatic despite guideline directed management and therapy for heart Mar 30 2025 For patients awaiting mitral valve repair it is recommended to inform your dentist about your upcoming cardiac surgery so they can prioritize necessary dental treatments Three operations exist to fix the mitral valve MV repair plasty MVr MV Replacement MVR with preservation of the subvalvular apparatus and MVR with removal of the subvalvular apparatus

Each approach has pros and cons and the indications for each procedure are therefore slightly different Based on the cardiac condition an appropriate modification in dental care is crucial

A multidisciplinary approach including the patient's cardiologist can potentially reduce complications and improve dental treatment results Apr 29 2014 At the Forefront of Cardiothoracic Surgery AATS members have a proven record of distinction within the specialty and have made significant contributions The surgical treatment options for mitral stenosis are not limited to valve replacement but also include valve repair procedures such as valvotomy or balloon valvuloplasty since the re-stenosis rates are lower than those in aortic stenosis [13].
