ApacheCassandrais an open source NoSQL distributed database trusted by thousands of companies for scalability and high availability without compromising performance This is the official documentation for ApacheCassandra

If you would like to contribute to this documentation you are welcome to do so by submitting your contribution like any other patch following these instructions Oct 29 2025 You can startCassandrawith `sudo servicecassandrastart` and stop it with `sudo servicecassandrastop`

However normally the service will start automatically. For this reason be sure to stop it if you need to make any configuration changes

Verify thatCassandrais running by invoking `nodetool status` from the command line Since it is a distributed database Cassandracan and usually does have multiple nodes. A node represents a single instance ofCassandra

These nodes communicate with one another through a protocol called gossip which is a process of computer peer to peer communication Read through theCassandraBasics to learn main concepts and howCassandraworks at a high level. To understandCassandrain more detail head over to the Docs

Browse through the Case Studies to learn how other users in our worldwide community are getting value out ofCassandra Install the RPM build on CentOS and RHEL based distributions if you want to installCassandrausing YUM

Install the Debian build on Ubuntu and other Debian based distributions if you want to installCassandrausing APT Cassandrawas initially designed at Facebook using a staged event driven architecture SEDA

This initial design implemented a combination of Amazons Dynamo distributed storage and replication techniques and Googles Bigtable data and storage engine model Additional information This section covers how to get started using ApacheCassandraand should be the first thing to read if you are new toCassandra Cassandra's default configuration file `cassandra.yaml` is sufficient to explore a simple single node cluster

However anything beyond running a single node cluster locally requires additional configuration to variousCassandraconfiguration files Cassandra5.0 introduces vector search which leverages storage attached indexing and dense indexing techniques to transform data exploration and analysis

This update is especially impactful for domains like machine learning and artificial intelligence AI.
