ApacheCassandra is an open source NoSQL distributed database trusted by thousands of companies for scalability and high availability without compromising performance. This is the official documentation for ApacheCassandra.

If you would like to contribute to this documentation you are welcome to do so by submitting your contribution like any other patch following these instructions. Since it is a distributed database Cassandra can and usually does have multiple nodes. A node represents a single instance of Cassandra.

These nodes communicate with one another through a protocol called gossip which is a process of computer peer to peer communication. Oct 29 2025 You can start Cassandra with `sudo servicecassandra start` and stop it with `sudo servicecassandra stop`. However normally the service will start automatically.

Browse through the Case Studies to learn how other users in our worldwide community are getting value out of Cassandra. Cassandra 5.0 introduces vector search which leverages storage attached indexing and dense indexing techniques to transform data exploration and analysis.

This update is especially impactful for domains like machine learning and artificial intelligence. AI. Cassandra was initially designed at Facebook using a staged event driven architecture SEDA.

This initial design implemented a combination of Amazon's Dynamo distributed storage and replication techniques and Google's Bigtable data and storage engine model. Install the RPM build on CentOS and RHEL based distributions if you want to install Cassandra using YUM.

Install the Debian build on Ubuntu and other Debian based distributions if you want to install Cassandra using APT. Here are known Cassandra client drivers organized by language.

Before choosing a driver you should verify the Cassandra version and functionality supported by a specific driver. Cassandra's default configuration file `cassandra.yaml` is sufficient to explore a simple single node cluster.

However anything beyond running a single node cluster locally requires additional configuration to various Cassandra configuration files.
