Jun 24 2011 is there a possibility thatcastinga double created via Math.round will still result in a truncated down number No round will always round your double to the correct value and then it will be cast to an long which will truncate any decimal places

But after rounding there will not be any fractional parts remaining. Here are the docs from Math.round double Returns the closest long to Mar 15 2011 Castingcan be used to clearly state that you are calling a child method and not a parent method

So in this case it s always a downcast or more correctly a narrowing conversion Possible Duplicate Castingvs using the as keyword in the CLR I recently learned about a different way to cast

Rather than using SomeClass someObject = SomeClass obj one can use this sy 2 Your problem is not the lack of dynamiccasting .CastingInteger to Double isn t possible at all

You seem to want to give Java an object of one type a field of a possibly incompatible type and have it somehow automatically figure out how to convert between the types Sep 25 2008 DirectCastingTypes don t have to be strictly related. It comes in all types of flavors

Custom implicit explicitcasting Usually a new object is created. Value Type Implicit Copy without losing information. Value Type Explicit Copy and information might be lost

IS A relationship Change reference type otherwise throws exception Feb 5 2025 Why Use [PObject] TypeCastingGenerally do NOT use [psobject] casts In most cases it is at best an unnecessary virtual no op and at worst results in unexpected behavior

[psobject] is a meant to be invisible helper type used behind the scenes to transparently wrap instances of other .NET types

It is for this reason that a [psobject] instance that wraps an instance of a .NET type acts Aug 26 2008 Static cast is also used to cast pointers to related types for examplecastingvoid\* to the appropriate type

dynamic\_cast Dynamic cast is used to convert pointers and references at run time generally for the purpose ofcastinga pointer or reference up or down an inheritance chain inheritance hierarchy

dynamic\_cast expression Mar 13 2011 Castingin Java isn t magic it s you telling the compiler that an Object of type A is actually of more specific type B and thus gaining access to all the methods on B that you wouldn t have had otherwise
