The cat << EOF syntax is very useful when working with multi line text in Bash eg. when assigning multi line string to a shell variable file or a pipe

Examples of cat << EOF syntax usage in Bash Apr 1 2022 xnew_from_cat= torch.cat x x x 1 print f {xnew_from_cat.size } print stack serves the same role as append in lists. i.e

it doesn't change the original vector space but instead adds a new index to the new tensor so you retain the ability get the original tensor you added to the list by indexing in the new dimension Is there replacement for cat on Windows [closed] Asked 17 years 3 months ago Modified 9 months ago Viewed 552k times cat Some text here

> myfile.txt Possible? Such that the contents of myfile.txt would now be overwritten to Some text here. This doesn't work for me but also doesn't throw any errors. Specifically interested in a cat based solution not vim vi emacs etc

All examples online show cat used in conjunction with file inputs not raw text May 26 2021 Can someone please shed some light on an equivalent method of executing something like quot catfile1 quot in Linux ? What I want to do is to give control to the keyboard stream which is quot 1catwith <<EOF>> will create or append the content to the existing file won't overwrite

whereas catwith <<EOF> will create or overwrite the content An essential difference between cat and print is the class of the object they return

This difference has practical consequences for what you can do with the returned object Jun 6 2013 cat countryInfo.txt grep v ^ >countryInfo n.txt After some research i found that cat is for concatenation and grep is for regular exp search don't know if i am right but what will the above command result in since both are combined together ? Thanks in Advance

EDIT I am asking this as i don't have linux installed. Else i could test it Nov 22 2012 First one cat filename grep regex Normally cat opens file and prints its contents line by line to stdout. But here it outputs its content to pipe

After that grep reads from pipe it takes pipe as stdin then if matches regex prints line to stdout. But here there is a detail grep is opened in new shell process so pipe forwards its input as output to new shell process

Second one grep Mar 10 2021 If cat doesn't stop it's because the symbol is for parameter. And you run cat with no parameter. Actually it didn't run indefinitely the shell waits for you to enter the end of the command. cat is a command that simply reads files

In your example it will read your file fruits.
