Thecat<<EOF syntax is very useful when working with multi line text in Bash eg.  
when assigning multi line string to a shell variable file or a pipe

Examples ofcat<<EOF syntax usage in Bash Apr 1 2022 xnew\_from\_cat= torch.cat x x  
x 1 print f {xnew\_from\_cat.size } print stack serves the same role as append in  
lists. i.e

it doesn't change the original vector space but instead adds a new index to the  
new tensor so you retain the ability get the original tensor you added to the  
list by indexing in the new dimension Is there replacement forcaton Windows  
[closed] Asked 17 years 3 months ago Modified 9 months ago Viewed 552k times cat  
Some text here

> myfile.txt Possible? Such that the contents of myfile.txt would now be  
overwritten to Some text here. This doesn't work for me but also doesn't throw  
any errors. Specifically interested in acat based solution not vim vi emacs etc

All examples online showcatused in conjunction with file inputs not raw text Jun  
6 2013 catcountryInfo.txt grep v ^ >countryInfo n.txt After some research i  
found thatcat is for concatenation and grep is for regular exp search don't know  
if i am right but what will the above command result in since both are combined  
together ? Thanks in Advance

EDIT I am asking this as i dont have linux installed. Else i could test it Jul 4  
2016 Whilecatdoes stand for concatenate what it actually does is simply display  
one or multiple files in order of their appearance in the command line arguments  
tocat

The common pattern to view the contents of a file on Linux or \*nix systems is  
cat<file> The main difference betweenecatand Git scat file is that it only  
displays a single file hence the file part

Git scat file doesn't May 26 2021 Can someone please shed some light on an  
equivalent method of executing something like quot catfile1 quot in Linux ? What  
I want to do is to give control to the keyboard stream which is quot An  
essential difference betweenecatand print is the class of the object they return

This difference has practical consequences for what you can do with the returned  
object 1catwith <<EOF>> will create or append the content to the existing file  
won't overwrite

whereascatwith <<EOF> will create or overwrite the content May 14 2009 46 There  
are a few ways to pass the list of files returned by the find command to  
thecatcommand though technically not all use piping and none actually pipe  
directly tocat
