A cone is formed by a set of line segments, half lines, or lines connecting a common point, the apex, to all of the points on a base.

In the case of line segments, the cone does not extend beyond the base, while in the case of half lines, it extends infinitely far. Jun 12 2025 A cone is a unique three-dimensional shape with a flat circular face at one end and a pointed tip at another end.

The word cone is derived from the Greek word *konos*, meaning a peak or a wedge. A cone is a three-dimensional figure that has a circular base and a pointed tip called an apex.

Learn about its definition, formulas, types, with some solved examples. A cone, usually referred to as a circular cone, is a 3D geometric figure that has a circular base and comes to a point outside the base.

Below are two types of cones. A cone is a 3D shape with a flat circular base and a curved surface that forms a sharp point at the top, called a vertex.

Learn the definition, parts, formulas, more. Cone in mathematics: the surface traced by a moving straight line, the generatrix, that always passes through a fixed point, the vertex.

The path to be definite is directed by some closed plane curve, the directrix, along which the line always glides. What is a cone? A cone is a 3D shape that has a flat circular base and a curved surface that angles toward a single point called a vertex or apex.

The curved surface of the cone is also called the lateral or side surface.
