May 7 2025 AnRPRtest is a screening for syphilis. Learn how it works what to expect and more RPR Monitor with Reflex to Titer This is a non treponemal screening test for syphilis

False positive results may occur due to systemic lupus erythematosus leprosy brucellosis atypical pneumonia typhus yaws pinta or pregnancy. Monitoring ofRPRis helpful in assessing effectiveness of therapy This assay provides a rapid plasma reagin RPR titer

This test can be used to monitor response to therapy in patients treated for syphilis infection

This assay can be used to help diagnose congenital syphilis when maternal and neonate sera are tested concurrently The traditional syphilis testing algorithm begins with theRPR nontreponemal test with positive samples reflexing toRPRtiterand treponemal antibody testing

Interpretation of results obtained must take into account patient symptoms and clinical history A positiveRPRtest should be followed by another type of test to diagnose syphilis

If you have been treated for syphilis in the past anRPRtest that shows a titerincrease of fourfold means you likely have a new syphilis infection if you were not fully treated in the past Aug 2 2025 RPRtitersthenmonitor treatmenteffectiveness with a significant decrease e.g

a fourfold drop indicating a successful response. Follow up testing is usually recommended at specific intervals such as 6 and 12 months post treatment especially for individuals with HIV or those treated for late latent syphilis Initial screening test for syphilis traditional algorithm

Confirmatory test for reactive treponemal test eg EIA CIA reverse algorithm Preferred test for monitoringtreatmentresponse in established syphilis. Separate serum from cells ASAP or within 2 hours of collection. Transfer 1 mL serum to an ARUP standard transport tube

Min 0.5 mL Avoid freezing if possible. Serum separator TheRPR Monitor withReflextoTiterTest screens for syphilis by detecting antibodies to *Treponema pallidum*

If positive areflextiterdetermines antibody concentration to assess disease activity andtreatmentresponse Highlights This assay provides a rapid plasma reagin RPR titer. This test can be used to monitor response to therapy in patients treated for syphilis infection

This assay can be used to help diagnose congenital syphilis when maternal and
