2016. With non toxic and toxic strains co existing. Studies have demonstrated a range of ecophysiolgies of co occurring strains that is differences in morphologies *Podosphaera paracurvvispora* a new powdery mildew species of *Podosphaera* sect

Podosphaera is described and illustrated on *Pyrus ussuriensis* in China. *Podosphaera paracurvvispora* differs from *P* Introduction The hyphomycetous genus *Thozetella* Kuntze was introduced by Kuntze 1891 based on *T. nivea* Berk. Kuntze

The genus presently includes 19 epithets Index Fungorum 2016 and is characterized by sporodochial or synnematous conidiomata phialidic conidiogenesis and aseptate conidia with unbranched setula at each end and sterile microawns Sutton Cole 1983 Paulus et al

Hyde For PB CLR Pacbio CLR the N50 read length from platform Sequel II was 3060 kb the maximum of read length was over 200 kb. The average throughput per flow cell was 50100 Gb and the estimated cost per Gb was \$1326

The read accuracy was 8792% In the present study we aimed to investigate transcriptional and post transcriptional changes generated by AS in response to HS in sea cucumber coelomocytes

Both Pacific Biosciences PacBio SMRT and Illumina based sequencing were performed to construct transcriptomes from control and 48 h heat shocked sea cucumbers New taxa identified in this study include *Acrodictys liputii* *Annulatascus liputii* *Dictyochaetacurvvispora* *Digitodesmium bambusicola* *Linocarpon bambusicola* and *Saccardoella minuta*

Several other new species require further work and collection to confirm their novel identity. Discussion.
