Mar 22 2016 The above command line defines an environment variable with name fileName starting with fixed string db_ appending with %date ~ 4 4% the last four characters of the current local date which is obviously the year appending with %date ~ 10 2% the tenth and ninth characters from right side of the current local date which is most likely the month Mar 4 2010 where A.Date >= 2010 04 01 it will do the conversion for you but in my opinion it is less readable than explicitly converting to a DateTime for the maintenance programmer that will come after you Dec 21 2009 Is there a built in method for converting a date to a datetime in Python for example getting the datetime for the midnight of the given date? The opposite conversion is easy datetime has a .date Sep 7 2023 Delete all old emails after a certain date I have too many emails

How do I delete all those older than a certain date? I haven't tried anything because I can't keep selecting and deleting 10 000 old emails I tried using \$ date in my bash shell script however I want the date in YYYY MM DD format

How do I get this? newDate .getTime Functionally equivalent to newDate .valueOf Date.now Functionally equivalent to the 2 methods above As mentioned in the comments and MDN links Date.now is not supported in Internet Explorer 8

So if IE 8 compatibility is a concern you should use newDate .valueOf at the cost of slightly diminished code readability Jul 22 2016 If the datatype is date time the format shown is dependant on your local settings. Dates don't have an inherent format

If you want to display a particular format Just giving a more up to date answer in case someone sees this old post

Adding utc=False when converting to datetime will remove the timezone component and keep only the date in a datetime64 [ns] data type Jan 24 2017 I have a view in the Oracle DB which has the field called Update_Date I need to select all the fields from the view if the update_date is equal to yesterday's date may be Currentdate 1

I tried Apr 21 2020 date If you want to cast into date then you can first cast to datetime64 [ns] and then use dt.date to get a column of datetime.date objects.
