Downsyndrome is a set of cognitiveandphysical symptoms that result from having an extra chromosome 21 or an extra piece of that chromosome. It is the most common chromosomal cause of mild to moderate intellectual disabilities

People withDownsyndrome also have some distinct physical features such as a flat looking face andthey are at risk for a number of other health conditions UnderstandingDownsyndromeandother intellectualanddevelopmental disabilities is part of the reason NICHD was established

Today the institute continues to lead research on the causes progression treatment andmanagement ofDownsyndrome as well as on conditionsanddiseases that are associated with the syndrome The symptoms ofDownsyndrome vary from person to person andpeople withDownsyndrome may have different problems at different times of their lives People withDownsyndrome are at a greater risk for a number of health problemsandconditions than are people who do not haveDownsyndrome

Many of these associated conditions may require immediate care right after birth occasional treatment throughout childhoodandadolescence or long term treatments throughout life Nov 22 2023 Downsyndrome describes a set of cognitiveandphysical symptoms that result from an extra copy or part of a copy of chromosome 21 Children withDownsyndrome are at an increased risk for some health problems but not all will have serious health problems As the registry grows familiesandresearchers learn more aboutDownsyndromeandidentify similaritiesanddifferences in the symptomsandtreatment of people withDownsyndrome from around the world

The information collected helps guide future researchandtreatment

Learn more about DS Connect TheDownSyndrome Registry Oct 23 2024 The NIH INCLUDE Project launched a new long term study called theDownSyndrome Cohort Development Program to observeandtrack health data of people withDownsyndrome from birth to adulthood Health care providers can check forDownsyndrome during pregnancy or after a child is born Downsyndrome is the most frequent chromosomal cause of mild to moderate intellectual disability.
