Feb 18 2011 I find %~dp0 very useful and I use it a lot to make my batch files more portable. But the label itself seems very cryptic tome What is the ~ doing? Doesdpmean drive and path? Does the 0 ref It focuses on teaching you how to develop aDPsolution incrementally

You will realize learning recursion which is hard is the stepping stone to solvingDPquestions remember recurrent relation!. So practice intelligently try learning the problem patterns and recursion.DPwould become easy eventually it takes time though

Reply reply 2011 1 An sp is the same base unit asdp but is scaled by the user s preferred text size its a scale independent pixel so you should use this measurement unit when defining text size but never for layout sizes

Supporting Different Densities Jan 5 2011 968 I have created my application with the height and width given in pixels for a Pantech device whose resolution is 480x800. I need to convert height and width for a G1 device

I thought converting it intodpwill solve the problem and provide the same solution for both devices. Is there any easy way to convert pixels todp? Any suggestions? Adpis a physical distance of 1 160th of an inch

The dpto pixels formula is interesting $dp = \frac{pixels}{dpi}$ Is equivalent to $dp = \frac{pixels}{160}$ dpi 160 is an interesting factor

Its the relative density compared to android s mdpi bin and the amount you must scale your graphics by for the various resource bins Jan 8 2010 The ratio ofdp to pixel will change with the screen density but not necessarily in direct proportion

Note The compiler accepts both dip and dp though dp is more consistent with sp Jul 1 2014 I am not asking what is the difference between dp sp and px. I am designing a website based on google s new material design all the measurements are indp for grid and sp for text

My questio May 31 2024 Exploring Unit Measurements in Android Development Understanding the different units of measurement in Android development is critical for creating user interfaces that are flexible and adaptive across a wide range of devices

Android supports various units of measurement including pixels px density independent pixels dp or dip scale independent pixels sp and others. Each unit plays DP1.4HDMI2.14K120Hz 4K144Hz?.
