Feb 18 2011 I find %~dp0 very useful and I use it a lot to make my batch files more portable. But the label itself seems very cryptic to me What is the ~ doing? Does dp mean drive and path? Does the 0 ref It focuses on teaching you how to develop a DP solution incrementally

You will realize learning recursion which is hard is the stepping stone to solving DP questions remember recurrent relation!. So practice intelligently try learning the problem patterns and recursion. DP would become easy eventually it takes time though

Reply reply 2011 1 An sp is the same base unit as dp but is scaled by the user's preferred text size it's a scale independent pixel so you should use this measurement unit when defining text size but never for layout sizes

Supporting Different Densities Jan 5 2011 968 I have created my application with the height and width given in pixels for a Pantech device whose resolution is 480x800. I need to convert height and width for a G1 device

I thought converting it to dp will solve the problem and provide the same solution for both devices. Is there any easy way to convert pixels to dp? Any suggestions? A dp is a physical distance of 1/160th of an inch

The dp to pixels formula is interesting $dp = \frac{pixels}{dpi} \times 160$ Is equivalent to $dp = \frac{pixels}{160 dpi}$ 160 is an interesting factor

It's the relative density compared to Android's mdpi bin and the amount you must scale your graphics by for the various resource bins Jan 8 2010 The ratio of dp to pixel will change with the screen density but not necessarily in direct proportion

Note The compiler accepts both dip and dp though dp is more consistent with sp Jul 1 2014 I am not asking what is the difference between dp, sp and px. I am designing a website based on Google's new material design all the measurements are in dp for grid and sp for text

My question May 31 2024 Exploring Unit Measurements in Android Development Understanding the different units of measurement in Android development is critical for creating user interfaces that are flexible and adaptive across a wide range of devices

Android supports various units of measurement including pixels, px, density-independent pixels, dp or dip, scale-independent pixels, sp and others. Each unit plays a role in ensuring the UI is consistent across different devices. DP 1.4 HDMI 2.1 4K 120Hz 4K 144Hz?.
