Nov 10 2024 Problem Find the surface integral $I = \iint_S 2x^2 y dy dz + y^2 dz dx + 4xz^2 dx dy$ where S is curved surface of the cylinder $y^2 + z^2 = 9$ bounded by the planes $x=0 \parallel x=2$ Possible Duplicate Explain $\iint \mathrm{d}x \mathrm{d}y = \iint r \mathrm{d}\alpha \mathrm{d}r$ I m reading the proof of Gaussian integration

When we change to polar coordinates why do we get an May 2 2015 Okay this may sound stupid but I need a little help What do $\frac{d}{dx}$ and $\frac{dy}{dx}$ mean? I need a thorough explanation

Thanks The statement is imprecise eigenvectors corresponding to distinct eigenvalues of a symmetric matrix must be orthogonal to each other. Eigenvectors corresponding to the same eigenvalue need not be orthogonal to each other

However since every subspace has an orthonormal basis you can find orthonormal bases for each eigenspace so you can find an orthonormal basis of eigenvectors Apr 8 2018 I understand the meaning of $\frac{dy}{dx}$ and $\int f(x) dx$ but outside of that what do $dy du dx$ etc mean? When I took calc I derivatives and integrals Apr 2 2017 Expanding out $x y^2$ we get $x^2 + x y^2 + y^2 = 2 x^2 xy + y^2$ Then complete the square $x^2 xy + y^2 = \left(x + \frac{y}{2}\right)^2 + \frac{3y^2}{4}$ so that Oct 7 2015 its actually \dot{x} or $\frac{dx}{dt}$ the term inside of the integral Feb 15 2016 This isn t really an answer as it stands answer should be self contained but this answer lacks the mathematically acceptable explanation it alludes to so it s not very useful

If you re going to reproduce anything from a book you might as well reproduce the part that answers the question rather than the part that asks the questions Check that you are optimizing a convex function over a set that is convex and without boundary Nov 23 2020 In this lecture on method of moment we have why is gradient of ψ inverse adxdmatrix? K th moment m_k is defined as $\mathbb{E}[X^k]$ and can be estimated by.
