Jan 12 2022 It s sometimes like when GHub is auto updating that something is going on and GHub won t fully open after the update and stucks in infinite loading

Had to kill all processes like you the GHub Update was aswell active as a process I have done everything from uninstalling GHub the drivers for the g29 different USB ports literally anything you could do and I still get stuck on the loading resources page Apr 17 2021 So I downloaded a windows update and after it GHUB would not launch and would be stuck on the little loop animation

So I tried to uninstall GHUB the regular way but it simply would not uninstall. I did not manually delete any files but I redownloaded the app installer and I had to option to reinstall the app with the same settings

So I clicked that but the uninstall has been stuck on Logitech Gaming Software It just works

Logitech G Hub Barely works Keyboard G keys wont work when you assign something like Surround sound Does the same as the LGS But they now allow you to download custom lighting profiles and gaming profiles!Also Logitech G Hub is still in alpha beta testing and they ve even said barely any features work! It s more of a preview! The Logitech Sep 7 2021 today I got the logitech G502 Hero gaming mouse and G213 gaming keyboard

All went well so far except that both devices are shown as inactive in the Logitech GHub Software so I am not able to customize their colours. I got both products because they were shown as driver compatible with Mac OS since I mostly game on a Mac if that is important information

If anyone knows what could be Mar 12 2024 The webpage for the product will have what software is needed listed under the Compatibility tab

GHUB is the software for G products if any is needed so the G413 would work with it but the K380 would not Oct 30 2021 How to download older versions of Ghub? I just really really want to be able to finally make custom lighting effects on my 915. For \$220 it should work. This sucks

Feels great but the software has become a nightmare! Any help much appreciated Sep 9 2023 Ghub is a step down in usability hides menus all over the place and is twice as slow. And it doesn t work I saw messages going back a year ago to this same lighting issue and it s still not fixed. Just absurd

I ve used logitech for decades and love their hardware but ghub alone is making me return what would otherwise be an amazing keyboard Mar 10 2020 So I bought myself the G920 I can use it perfectly fine in games like F1 Dirt and ETS 2 but
