<<estefania guerrero xvideos>> Has anyone switched from Cura to the Anycubic slicer for FDM Best settings for Anycubic Kobra 2.

I use the Anycubic Slicer too. So far I got really good results from it and it gives accurate print estimates unlike Cura. I like knowing how long prints will take couldn t find any settings in Cura to that effect it seems to just assume a printer with 60 70mm s and calculate from there

Experienced users might shake their heads now but I only got my printer a week ago

Reply reply Jan 26 2024 Best settings for Anycubic Kobra 2 neo? Does anyone have any parameter suggestions to get good clean prints on anycubic Kobra 2 Neo? Like print speed retraction etc? Anycubic slicer doing fine but i feel the default Settings is messing with the quality print at 150 m ms

I usually print figurines and such May 27 2023 At my school they use Prusa printers with Prusa slicer and the supports are so easy to get off with no tools needed

I accidentally tried a Kobra setup on the Prusa printer and the supports were hard to get off as well I have used the wireless printing function before without any problems but ever since I updated the slicer I cant even send the STL file to the Jan 18 2024 Is there a way to change the infill per part with this slicer? Have multiple models on a sheet and for half need 100% infill and do not want to have to run two jobs Feb 14 2024 Using the any cubic slicer Scrollbar on the right I m able to figure out what layer I need to do my color change at

The scroll bar at the bottom gives me the location within the g code of that layer. The M601 Command will pause the printer. I ve read that M602 will resume printing. I have two problems

When I try to edit the G Code file I have trouble locating where to insert the pause The print came out perfect and since I m a noob to printing I just wanted to understand is there any specific setting in cura or anycubic slicer which I can use so that I can get the same pattern and the matte finish for the top layer 2nd image from the bottom layer 1st image

Not sure if this is relevant but I generally use top bottom fill pattern concentric in cura and hilberts curve Oct 23 2023 I didn t like anycubic slicer couldn t find settings for tree supports and automatic supports takes a ton of filament

I ll try again prusa slicer with the instructions on the usb though I couldn t manage to make it work yesterday Jan 31 2024 How do you turn on vase mode on the Anycubic slicer? Basicly what the title is
