Mar 13 2014 We all know that our university is one of the best for a variety of reasons and one of those is that many of our favourite movies and TV shows were filmed on campus! Location 1 Iona Building UBCs Iona building is disguised as a building at Harvard University the popular TV show Fringe as seen in the picture above

Another TV show filmed in Iona building is Psych where the the building Jul 12 2016 But what I would like to do is to apply ?nocache=1 to every URL related to the site including the assets like style.css so that I get the non cached version of the files The list is just examples of different techniques it s not for direct insertion

If copied the second would overwrite the first and the fourth would overwrite the third because of the http equiv declarations AND fail with the W3C validator

At most one could have one of each http equiv declarations pragma cache control and expires I don t find get the practical difference between Cache Control no store and Cache Control no cache. As far as I know no store means that no cache device is allowed to cache that response

In the Our investigations have shown us that not all browsers respect the HTTP cache directives in a uniform manner. For security reasons we do not want certain pages in our application to be cached eve Ok even if you aren t using express what essentially needed is to set the nocache headers

I m adding the headers in a reusable middleware otherwise you can set those headers in any way that works Jun 26 2009 The header Cache Control max age=0 implies that the content is considered stale and must be re fetched immediately which is in effect the same thing as Cache Control no cache Beware of ETag Even if you are using nocache the ETag header isn t removed because it works in a different way

It s generated at the end of the request and could be another source of unintended caching. In order to handle it you have two choices. app.set The first is disabling it using express builtin app.set etag false method

on headers The second is removing the header just before Feb 24 2016 I have build a Docker image from a Docker file using the below command. \$ docker build t u12_core f u12_core

When I am trying to rebuild it with the same command it s using the build cache li no store should not be necessary in normal situations and in some cases can harm speed and usability

It was intended as a privacy measure it tells browsers and caches that the
