Apr 12 2022 Pydantic v1 You can use the `extrafield` in the `Config` class to forbid extra attributes during model initialisation by default additional attributes will be ignored. For example Oct 18 2021 I have defined a pydantic Schema with `extra=Extra.allow` in Pydantic Config

Is it possible to get a list or set of extra fields passed to the Schema separately. For ex from pydantic import BaseModel May 2 2025 When using pip to install Python packages we can set the configurations so that it can refer to some private repository to install packages

The use case is for example for big companies where Mar 2 2023 If you are using pydantic 2 with pydantic settings and BaseSettings instead of BaseModel then set the config value of `extra` to allow or ignore

This is the new way of ignoring the extra configs in pydantic 2 Aug 22 2024 I m trying out uv to manage my Python project s dependencies and virtualenv but I can t see how to install all my dependencies for local development including the development dependencies

In my Mar 16 2015 I am using docker compose to run a test environment that consists of about 5 different containers. The inter container links and the shared volumes volumes from works wonderfully

I also expose Jan 11 2014 raise ValueError errmsg Extradata s end len s ValueError Extradata line 2 column 1 line 10 column 1 char 261900 6964758 PS. I use the word record but that s not the official name

Also if your file has newline characters like mine you can loop through it to loads one record at a time into a json variable Sep 24 2018 What is extra in pypi dependency? Asked 7 years 3months ago Modified 1 year 1 month ago Viewed 26k times I am trying to learn Qt 5.3 and this is my first program hello world

When I try to build it displays this error extracharacters after test expression. I cannot understand at all why this Nov 1 2019 I am struggling to figure out exactly how the `extra` argument for logging works

I have some legacy code I need to change which uses it and the code also requires logging to stdout. `import logging`.
