Jul 22 2019 Aformatted string literal orf string isastring literal that is prefixed withforF. These strings may contain replacement fields which are expressions delimited by curly braces {}

While other string literals always haveaconstant value formatted strings are really expressions evaluated at run time. Some examples of formatted string L Specifies thatafollowinga A e E f F g or G conversion specifier applies toalong double argument

The same rules specified for fprintf apply for printf sprintf and similar functions f strings are cute and remind me of Ruby syntax

But they don tseem to havealot of advantages and as you ve said they unnecessarily break compatibility with Python < 3.6 Aug 16 2018 How can I usef string with logic to format an int asafloat? I would like if ppl is True to format num to 2 decimal places and if ppl is False to rformat it as whatever it is

Something like st I haveastring in which I would like curly brackets but also take advantage of thef strings feature. Is there some syntax that works for this? Here are two ways it does not work. I would like to Dec 3 2012 Afew of these don tdo anything interesting or even anything visible

I have indicated those which don tdo anything visually

F3 + S Force Reload Visually does little lags flickers F3 +T Refresh Textures Visually does little lags flickers Shift + F3 +F Increase Render Distance F3 +F Decrease Render Distance F3 +A Load Renderers essentially reloads all visual Is there an easy way with Pythonf strings to fix the number of digits after the decimal point? Specificallyf strings not other string formatting options like .format or % For example let s s Reddit isanetwork of communities where people can dive into their interests hobbies and passions

There sacommunity for whatever you re interested in on Reddit Discussion about Path of Exile afree ARPG made by Grinding Gear Games Instead of usingf strings you can use the format method to interpolate dynamically withavery similar syntax

If you want the user to have access to onlyasmall number of specific variables you can do something like You can of course rename the key that the user inputs vs the variable name that you use.
