Jul 22 2019 A formatted string literal orf string is a string literal that is prefixed withforF. These strings may contain replacement fields which are expressions delimited by curly braces {}

While other string literals always have a constant value formatted strings are really expressions evaluated at run time. Some examples of formatted string L Specifies that a following a A e E f F g or G conversion specifier applies to a long double argument

The same rules specified for fprintf apply for printf sprintf and similar functions f strings are cute and remind me of Ruby syntax

But they don t seem to have a lot of advantages and as you ve said they unnecessarily break compatibility with Python < 3.6 Aug 16 2018 How can I usef string with logic to format an int as a float? I would like if ppl is True to format num to2decimal places and if ppl is False to rformat it as whatever it is

Something like st Reddit is a network of communities where people can dive into their interests hobbies and passions. There s a community for whatever you re interested in on Reddit I have a string in which I would like curly brackets but also take advantage of thef strings feature

Is there some syntax that works for this? Here are two ways it does not work. I would like to Dec 3 2012 A few of these don t do anything interesting or even anything visible. I have indicated those which don t do anything visually
