Jul 22 2019 A formatted string literal or string is a string literal that is prefixed with `f`. These strings may contain replacement fields which are expressions delimited by curly braces `{}`

While other string literals always have a constant value formatted strings are really expressions evaluated at run time. Some examples of formatted string L Specifies that a following a `A` `e` `E` `f` `F` `g` or `G` conversion specifier applies to a long double argument

The same rules specified for `fprintf` apply for `printf` `sprintf` and similar functions `f` strings are cute and remind me of Ruby syntax

But they don't seem to have a lot of advantages and as you've said they unnecessarily break compatibility with Python < 3.6 Aug 16 2018 How can I use string with logic to format an int as a float? I would like if `ppl` is `True` to format `num` to 2 decimal places and if `ppl` is `False` to rformat it as whatever it is

Something like `st` Reddit is a network of communities where people can dive into their interests hobbies and passions. There's a community for whatever you're interested in on Reddit I have a string in which I would like curly brackets but also take advantage of the strings feature

Is there some syntax that works for this? Here are two ways it does not work. I would like to Dec 3 2012 A few of these don't do anything interesting or even anything visible. I have indicated those which don't do anything visually

`F3 + S` Force Reload Visually does little lags flickers `F3 + T` Refresh Textures Visually does little lags flickers `Shift + F3 + F` Increase Render Distance `F3 + F` Decrease Render Distance `F3 + A` Load Renderers essentially reloads all visual Is there an easy way with Python `f` strings to fix the number of digits after the decimal point? Specifically `f` strings not other string formatting options like `.format` or `%` For example let's s Discussion about Path of Exile a free ARPG made by Grinding Gear Games Instead of using `f` strings you can use the `format` method to interpolate dynamically with a very similar syntax

If you want the user to have access to only a small number of specific variables you can do something like You can of course rename the key that the user inputs vs the variable name that you use.
