Downloading and installing Node.js and npm To publish and install packages to and from the public npm registry or a private npm registry you must install Node.js and the npm commandline interface using either a Node version manager or a Node installer

We strongly recommend using a Node version manager like nvm to install Node.js and npm Apr 3 2023 However you don't need to do that because Windows 10 and 11 come with an inbuilt package manager like Linux known as Winget

And in this article we will provide a step by step guide to installing Node.js and NPM on Windows 10 or 11 using the command terminal Aug 25 2025 WSL Step 3 Install Node.js and NPM via apt Open the WSL terminal Ubuntu or your chosen distribution and update your package list sudo apt update sudo Once the update is done Install Node.js using the following command sudo apt install nodejs sudo apt install npm Step 4 Verify Node.js and NPM Installation Dec 28 2023 The command resets the environment variables which enables running both programs from the terminal

Step 2 Verify Node.js and NPM installation To verify that Node.js is installed correctly run the following command in a new command prompt session node -v Check the NPM installation with npm -v Both commands display the program version

Test Node.js Installation There are several ways to Mar 10 2025 To check the installed version of Node.js run the following command in your Command Prompt node -v For npm use npm -v If Node.js and npm are installed successfully you should see their version numbers displayed in the terminal window Run Node.js scripts from the commandline The usual way to run a Node.js program is to run the globally available node command once you install Node.js and pass the name of the file you want to execute Nov 12 2024 Node.js is a cross platform runtime for running server side back end JavaScript apps outside the browser

This guide describes how to install the Node.js framework and the Node Package Manager NPM on Node.js provides a powerful commandline interface CLI that allows you to run JavaScript files manage packages debug applications and more

This guide covers the essential commands and techniques every Node.js developer should know. Note All commands should be run in a terminal or command prompt.
