Feb 12 2022 the code below prints out yet I would like to see the footlineonlyat the end even though I remove head does not work. Many thanks in advance

`\documentclass[10pt english 8pt]{beamer} \usetheme{ 17` is it possible to define different `\headerheight` for head and `\footheight` respectively? For example there is a logo image in the header which needs a large `\headerheight` and `onlytext` is in `foot` which needs a small `\headerheight`

Or does it have two variables to control the heights of `foot` and `head` respectively? I am using `\columns` in beamer to show two pictures. After I added `\footnote{ExampleText}` after captions the `ExampleText` just appear in each column

Now I want to show all of the `ExampleText` in the Sep 20 2015 The dagger which sometimes looks like a cross has long been used to as a `foot` or `side` note

Here s an example from 1582 though the practice is much older than this Here s a link to the page on Google Books As you can see the dagger is used here at a secondary level from the main set of glosses which used `superscript` letters

The dagger in this case is to the note on the far right by Nov 15 2023 KOMA Script has a build in feature to visualize the page header and footer package `scrlayer` `scrpage` with option `draft`. But IMHO the output with measuring in the background and the foreground is somehow confusing

So here an example with only one measure per head and `foot` `\documentclass[% % headheight=60pt % headinclude=false % default % headinclude=true % footheight=60pt % footinclude` Sep 10 2018 I was wondering if someone knows if there is a `foot` feet symbol available in any of latex packages that I could use in my text? I would appreciate any hint

I do really mean a `foot` feet icon as in In a document I am using `\usepackage[style=mla babel=hyphen backend=biber]{biblatex}` together with the `\footcite` command and everything is perfect. There is a difficulty when I want to include a reference within a longer footnote containing extra text

I tried something like `\footnote{extra text extra text \cite{key} extra text}` but the output format of the `\cite` command will not be the same I would like to make the footline color black and the text white

I found this Beamer Background Color for Footline but didn t understand how it applied to my example

`\documentclass{beamer} \us A` How do I shift the footnote vertically down 1 mm or so? B I want to introduce some additional space in between one footnote and the next one and between the first footnote and the line that Nov 17 2012 For my
