Sep 26 2022 Definition G is a generalized inverse of A if and only if $AGA = A$. G is said to be reflexive if and only if $GAG = G$

I was trying to solve the problem If A is a matrix and G be it s generalized inverse then G is reflexive if and only if $\text{rank } A = \text{rank } G$ Sep 20 2015 Your proof of the second part works perfectly moreover you can simply omit the reasoning $\text{gag}^{\{1\}}^2 = \text{id}$ since this is exactly what you ve done in part 1 Dec 7 2011 We have a group G where a is an element of G

Then we have a set $Z_a = \{g \in G \mid ga = ag\}$ called the centralizer of a . If I have an $x \in Z_a$ how Sep 7 2024 This is an exercise in Weibel quot Homological Algebra quot chapter 6 on group cohomology. For reference this is on Page 183

So the question was asking us to Dec 5 2018 Try checking if the element $ghg^{\{1\}}$ you thought of is in $C_{\text{gag}^{\{1\}}}$ and then vice versa Jan 3 2019 The stabilizer subgroup we defined above for this action on some set $A \subseteq G$ is the set of all $g \in G$ such that $gAg^{\{1\}} = A$ which is exactly the normalizer subgroup $N_G A$! Jul 1 2016 I am trying to prove that $gAg^{\{1\}} \subseteq A$ implies $gAg^{\{1\}} = A$ where A is a subset of some group G and g is a group element of G

This is stated without proof in Dummit and Foote Disclaimer This is not exactly an explanation but a relevant attempt at understanding conjugates and conjugate classes Sep 27 2015 Let H is a Subgroup of G . Now if H is not normal if any element $\{g \in G\}$ doesn t commute with H

Now we want to find if not all $\{g \in G\}$ then which are the elements of G that commute with every element of H ? they are normalizer of H . i.e. the elements of G that vote yes for H when asked to commute

Hence $N_G H = \{g \in G \mid gH = Hg\}$ Now Centralizer of an element $\{a \in G$ Jul 9 2015 $1 \text{ } gag^{\{1\}}^{\{1\}} = g^{\{1\}} a^{\{1\}} g^{\{1\}} = ga^{\{1\}} g^{\{1\}}$
 $2 \text{ } ga g^{\{1\}} g b g^{\{1\}} = g a b g^{\{1\}}$ I m stuck at this point Is it correct so far? is.
