Sep 26 2022 Definition G is a generalized inverse of A if and only if  $AGA=A.G$  is said to be reflexive if and only if  $GAG=G$

I was trying to solve the problem If A is a matrix and G be it's generalized inverse then G is reflexive if and only if  $\text{rank } A = \text{rank } G$  Sep 20 2015 Your proof of the second part works perfectly moreover you can simply omit the reasoning \$  $\text{gag}^{\{1\}}^2 = \dots = e$  since this is exactly what you've done in part 1 Dec 7 2011 We have a group  $\$G\$$  where  $\$a\$$  is an element of  $\$G\$$

Then we have a set  $\{Z \mid a = \{g \in G \mid ga = ag\}\}$  called the centralizer of  $\{a\}$ . If I have an  $\{x \in Z \mid a\}$  how Sep 7 2024 This is an exercise in Weibel's Homological Algebra chapter 6 on group cohomology. For reference this is on Page 183

So the question was asking us to Dec 5 2018 Try checking if the element  $ghg^{\{1\}}$  you thought of is in  $\{C \mid gag^{\{1\}}\}$  and then vice versa Jan 3 2019 The stabilizer subgroup we defined above for this action on some set  $\{A \subseteq G\}$  is the set of all  $\{g \in G\}$  such that  $\{gAg^{\{1\}}\} = A$  which is exactly the normalizer subgroup  $\{N_G A\}$  Jul 1 2016 I am trying to prove that  $\{gAg^{\{1\}}\} \subseteq A$  implies  $\{gAg^{\{1\}}\} = A$  where A is a subset of some group G and g is a group element of G

This is stated without proof in Dummit and Foote's Disclaimer This is not exactly an explanation but a relevant attempt at understanding conjugates and conjugate classes Sep 27 2015 Let H be a Subgroup of G. Now if H is not normal if any element  $\{g \in G\}$  doesn't commute with H

Now we want to find if not all  $\{g \in G\}$  then which are the elements of G that commute with every element of H? they are normalizer of H. i.e. the elements of G that vote yes for H when asked to commute

Hence  $\{N_G H = \{g \in G \mid gH = Hg\}\}$  Now Centralizer of an element  $\{a \in G\}$  Jul 9 2015  $\{g \mid gag^{\{1\}} = g\} = \{g \mid g^{\{1\}}a^{\{1\}}g^{\{1\}} = a\} = \{g \mid g^{\{1\}} = a^{\{1\}}g^{\{1\}}\}$   $\{g \mid g^{\{1\}} = a^{\{1\}}g^{\{1\}}\} = \{g \mid g^{\{1\}} = ab^{\{1\}}g^{\{1\}}\}$  I'm stuck at this point Is it correct so far? is.
