Sep 26 2022 Definition G is a generalized inverse of A if and only if  $AGA=A.G$  is said to be reflexive if and only if  $GAG=G$

I was trying to solve the problem If A is a matrix and G be it s generalized inversethenG is reflexive if and only if  $\text{rank } A = \text{rank } G$  Sep 20 2015 Your proof of the second part works perfectly moreover you can simply omit the reasoning \$ $gag^{\{ 1\}}^2 = \text{cdots} = e$  since this is exactly what you ve done in part 1 Dec 7 2011 We have a group \$G\$ where \$a\$ is an element of \$G\$. Then we have a set \$Z a = \{g \in G \mid ga = ag\}\$ called the centralizer of \$a\$

If I have an \$x \in Z a\$ how Sep 7 2024 This is an exercise in Weibel quot Homological Algebra quot chapter 6 on group cohomology. For reference this is on Page 183

So the question was asking us to Dec 5 2018 Try checking if the element \$ghg^{\{ 1\}}\$ you thought of is in \$C gag^{\{ 1\}}\$ and then vice versa Jan 3 2019 The stabilizer subgroup we defined above for this action on some set \$A \subseteq G\$ is the set of all \$g \in G\$ such that \$gAg^{\{ 1\}} = A\$ which is exactly the normalizer subgroup \$N\_G A\$! Jul 1 2016 I am trying to prove that \$gAg^{\{ 1\}} \subseteq A\$ implies \$gAg^{\{ 1\}} = A\$ where A is a subset of some group G and g is a group element of G

This is stated without proof in Dummit and Foote Disclaimer This is not exactly an explanation but a relevant attempt at understanding conjugates and conjugate classes Sep 27 2015 Let H is a Subgroup of G. Now if H is not normal if any element \$g \in G\$ doesn t commute with H

Now we want to find if not all \$g \in G\$ then which are the elements of G that commute with every element of H? they are normalizer of H. i.e. the elements of G that vote yes for H when asked to commute

Hence \$N\_G H = \{g \in G \mid gH = Hg\}\$ Now Centralizer of an element \$a \in G\$ Jul 9 2015 \$1\$ \$gag^{\{ 1\}}^{\{ 1\}} = g^{\{ 1^{\{ 1\}}\}} a^{\{ 1\}} g^{\{ 1\}} = ga^{\{ 1\}} g^{\{ 1\}}\$ \$2\$ \$ga g^{\{ 1\}} g bg^{\{ 1\}} = g ab g^{\{ 1\}}\$ I m stuck at this point Is it correct so far? is.
