Sep 26 2022 Definition G is a generalized inverse of A if and only if $AGA=A.G$ is said to be reflexive if and only if $GAG=G$

I was trying to solve the problem If A is a matrix and G be it s generalized inverse then G is reflexive if and only if $\text{rank } A = \text{rank } G$ Sep 20 2015 Your proof of the second part works perfectly moreover you can simply omit the reasoning \$ $gag^{\{1\}}^2 = \dots = e$ since this is exactly what you ve done in part 1 Dec 7 2011 We have a group $\$G$$ where $\$a$$ is an element of $\$G$$. Then we have a set $\$Z a = \{g \in G \mid ga = ag\}$ called the centralizer of $\$a$$

If I have an $\$x \in Z a$ how Sep 7 2024 This is an exercise in Weibel quot Homological Algebra quot chapter 6 on group cohomology. For reference this is on Page 183

So the question was asking us to Dec 5 2018 Try checking if the element $\$ghg^{\{1\}}$ you thought of is in $\$C gag^{\{1\}}$ and then vice versa Jan 3 2019 The stabilizer subgroup we defined above for this action on some set $\$A \subseteq G$ is the set of all $\$g \in G$ such that $\$gAg^{\{1\}} = A$ which is exactly the normalizer subgroup $\$N_G A$ Jul 1 2016 I am trying to prove that $\$gAg^{\{1\}} \subseteq A$ implies $\$gAg^{\{1\}} = A$ where A is a subset of some group G and g is a group element of G

This is stated without proof in Dummit and Foote Disclaimer This is not exactly an explanation but a relevant attempt at understanding conjugates and conjugate classes Sep 27 2015 Let H is a Subgroup of G. Now if H is not normal if any element $\$g \in G$ doesn t commute with H

Now we want to find if not all $\$g \in G$ then which are the elements of G that commute with every element of H? they are normalizer of H. i.e. the elements of G that vote yes for H when asked to commute

Hence $\$N_G H = \{g \in G \mid gH = Hg\}$ Now Centralizer of an element $\$a \in G$ Jul 9 2015 $\$1 gag^{\{1\}}^{\{1\}} = g^{\{1\}}a^{\{1\}}g^{\{1\}} = ga^{\{1\}}g^{\{1\}}$ $\$2 \$ ga g^{\{1\}}g^{\{1\}} = g ab g^{\{1\}}$ I m stuck at this point Is it correct so far? is.
