Sep 26 2022 Definition G is a generalized inverse of A if and only if $AGA=A.G$ is said to be reflexive if and only if $GAG=G$

I was trying to solve the problem If A is a matrix and G be it's generalized inverse then G is reflexive if and only if $\text{rank } A = \text{rank } G$ Sep 20 2015 Your proof of the second part works perfectly moreover you can simply omit the reasoning $\$gag^{\{-1\}}^2=\cdots=e\$$ since this is exactly what you've done in part 1 Dec 7 2011 We have a group $\$G\$$ where $\$a\$$ is an element of $\$G\$$

Then we have a set $\$Z a = \{g \in G \mid ga = ag\}$ \$ called the centralizer of $\$a\$$. If I have an $\$x \in Z a$ \$ how Sep 7 2024 This is an exercise in Weibel's Homological Algebra chapter 6 on group cohomology. For reference this is on Page 183

So the question was asking us to Dec 5 2018 Try checking if the element $\$ghg^{\{-1\}}$ \$ you thought of is in $\$C gag^{\{-1\}}$ \$ and then vice versa Jan 3 2019 The stabilizer subgroup we defined above for this action on some set $\$A \subset G$ \$ is the set of all $\$g \in G$ \$ such that $\$gAg^{\{-1\}} = A$ \$ which is exactly the normalizer subgroup $\$N_G A$ \$! Jul 1 2016 I am trying to prove that $\$gAg^{\{-1\}} \subset A$ \$ implies $\$gAg^{\{-1\}} = A$ \$ where A is a subset of some group G and g is a group element of G. This is stated without proof in Dummit and Foote's Disclaimer. This is not exactly an explanation but a relevant attempt at understanding conjugates and conjugate classes Sep 27 2015 Let H be a Subgroup of G

Now if H is not normal if any element $\$g \in G$ \$ doesn't commute with H. Now we want to find if not all $\$g \in G$ \$ then which are the elements of G that commute with every element of H? they are normalizer of H. i.e. the elements of G that vote yes for H when asked to commute

Hence $\$N_G H = \{g \in G \mid gh = hg\}$ \$ Now Centralizer of an element $\$a \in G$ Jul 9 2015 \$1 \\$\\$ gag^{\{-1\}}^{\{-1\}} = g^{\{-1\}}^{\{-1\}} a^{\{-1\}} g^{\{-1\}} = ga^{\{-1\}} g^{\{-1\}} \$ \$2 \\$\\$ ga^{\{-1\}} g^{\{-1\}} = g^{\{-1\}} ab^{\{-1\}} g^{\{-1\}}\$ I'm stuck at this point. Is it correct so far? is.
