<gag on this 7> Reflexive Generalized Inverse Mathematics Stack Exchange Prove the centralizer of an element in.

Sep 26 2022 Definition G is a generalized inverse of A if and only if AGA=A.G is said to be reflexive if and only if GAG=G

I was trying to solve the problem If A is a matrix and G be it s generalized inverse then G is reflexive if and only if rank A =rank G Dec 7 2011 We have a group G where a is an element of G. Then we have a set $Z a = \{g\in G ga = ag\}$ called the centralizer of a

If I have an $x\in Z a $ how Dec 5 2018 Try checking if the element ghg^{1} you thought of is in $C gag^{1} $ and then vice versa Sep 7 2024 Thisis an exercise in Weibel quot Homological Algebra quot chapter 6ongroup cohomology. For reference thisisonPage 183

So the question was asking us to Sep 20 2015 Your proof of the second part works perfectly moreover you can simply omit the reasoning $ gag^{1}^2=\cdots=e$ sincethisis exactly what you ve done in part 1 Jan 3 2019 The stabilizer subgroup we defined above forthisactiononsome set $A\subseteq G$ is the set of all $g\in G$ such that $gAg^{1} = A$ which is exactly the normalizer subgroup $N_G A $! Sep 27 2015 Let H is a Subgroup of G

Now if H is not normal if any element $ {g \in G}$ doesn t commute with H. Now we want to find if not all $ {g \in G}$ then which are the elements of G that commute with every element of H? they are normalizer of H. i.e. the elements of G that vote yes for H when asked to commute

Hence $ {N_G H =\ {g \in G gH=Hg }\}$ Now Centralizer of an element $ {a \in G Jul 9 2015 $1 $$ gag^{1} ^{1}=g^{1^{1}}a^{1}g^{1}=ga^{1}g^{1}$ $2 $ $ ga g^{1}g bg^{1}=g ab g^{1}$ I m stuck atthispoint Is it correct so far? is Feb 24 2020 Prove that the relation $a\sim b$ if $b=gag^{1}$ for some $g\in G$ is an equivalence relationon$G$

Prove that $\forall u v\in G$ $uv\sim vu$. So I ve proved 1. My confusion lies in the fact that they appear to be the same question

I m sure I must be wrong but my approach was to again show that $\sim$ is an equivalence relation Jul 1 2016 I am trying to prove that $gAg^{1} \subset A$ implies $gAg^{1} = A$ where A is a subset of some group G and g is a group element of G.Thisis stated without proof in Dummit and Foote.
