Sep 26 2022 Definition G is a generalized inverse of A if and only if  $AGA=A.G$  is said to be reflexive if and only if  $GAG=G$

I was trying to solve the problem If A is a matrix and G be it's generalized inverse then G is reflexive if and only if  $\text{rank } A = \text{rank } G$  Sep 20 2015 Your proof of the second part works perfectly moreover you can simply omit the reasoning  $\$ gag^{\{1\}}^2 = \cdots = e \$$  since this is exactly what you've done in part 1 Dec 7 2011 We have a group  $\$G\$$  where  $\$a\$$  is an element of  $\$G\$$

Then we have a set  $\$Z a = \{g \in G \mid ga = ag\}$  called the centralizer of  $\$a\$$ . If I have an  $\$x \in Z a \$$  how Sep 7 2024 This is an exercise in Weibel quote Homological Algebra quote chapter 6 on group cohomology. For reference this is on Page 183

So the question was asking us to Dec 5 2018 Try checking if the element  $\$ghg^{\{1\}}\$$  you thought of is in  $\$C gag^{\{1\}} \$$  and then vice versa Jan 3 2019 The stabilizer subgroup we defined above for this action on some set  $\$A \subset G\$$  is the set of all  $\$g \in G\$$  such that  $\$gAg^{\{1\}} = A \$$  which is exactly the normalizer subgroup  $\$N_G A \$$  Jul 1 2016 I am trying to prove that  $\$gAg^{\{1\}} \subset A \$$  implies  $\$gAg^{\{1\}} = A \$$  where A is a subset of some group G and g is a group element of G. This is stated without proof in Dummit and Foote Disclaimer This is not exactly an explanation but a relevant attempt at understanding conjugates and conjugate classes Sep 27 2015 Let H is a Subgroup of G

Now if H is not normal if any element  $\$g \in G \$$  doesn't commute with H. Now we want to find if not all  $\$g \in G \$$  then which are the elements of G that commute with every element of H? they are normalizer of H. i.e. the elements of G that vote yes for H when asked to commute

Hence  $\$N_G H = \{g \in G \mid gh = hg\}$  Now Centralizer of an element  $\$a \in G \$$  Jul 9 2015  $\$1 \$ \$ gag^{\{1\}}^{\{1\}} = g^{\{1\}} a^{\{1\}} g^{\{1\}} = ga^{\{1\}} g^{\{1\}} \$$   $\$2 \$ \$ ga^{\{1\}} g^{\{1\}} = g^{\{1\}} ab^{\{1\}} g^{\{1\}} \$$  I'm stuck at this point Is it correct so far? is.
